Run 12 RHIC Machine/Experiments Meeting

19 Jun 2012

Agenda:

- Status Reports
- STAR/AnDY request for collisions at 2:00
- Other business

Run 12 Plan based on 20 weeks cryo operation
23 week schedule based on 4/10/12 Vigdor guidance, 6 June update

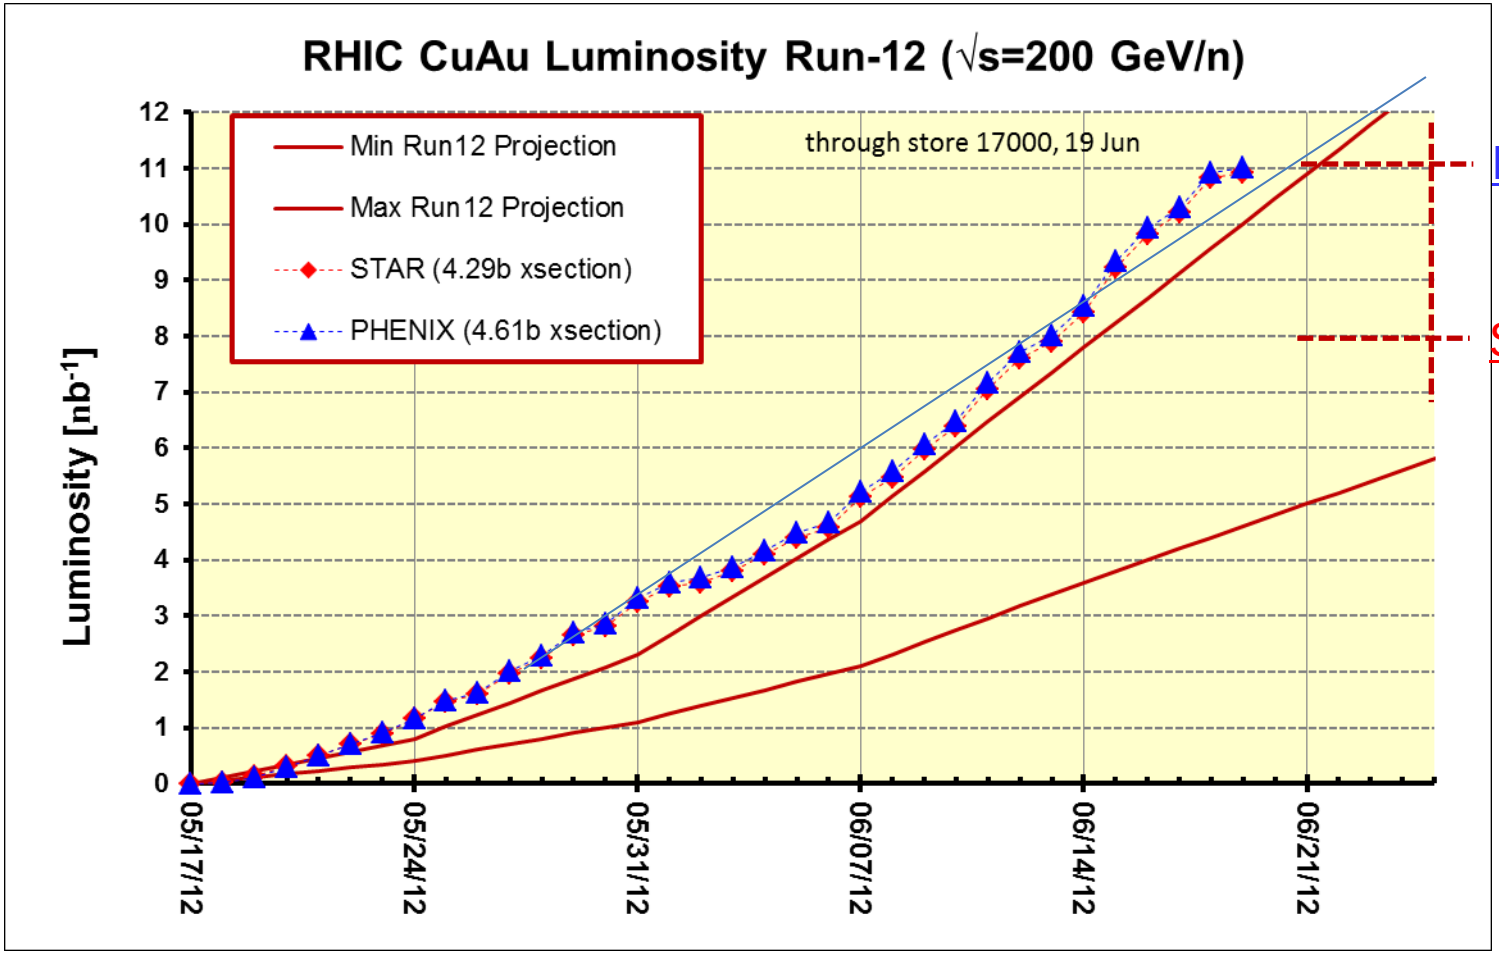
- 17 Jan, Begin cool-down to 4.5K
- 20 Jan, Cool-down to 4.5K in Blue and Yellow Ring complete, begin magnet setup
- 21-28 Jan, pp injection setup
- 28 Jan-3 Feb, LLRF, Ramp and store setup, begin 8 hr/night for experiments
- 3-10 Feb, 1 week ramp-up with 8 hrs/night for experiments
- 10 Feb, with store # 16397, begin *4 weeks pp physics* with further ramp-up
- 16 Feb, 24/7 stores begin
- 12 (Monday) March, **end 4.4 week pp physics √s = 200 GeV**, begin ½ week setup for √s = 510 GeV pp
- 16 March, begin 5 week pp physics (machine only) √s = 510 GeV
- 17/18 March, STAR/PHENIX physics start with longitudal polarization
- 18 April (Wednesday 1300), end physics begin pp beam development/APEX
- 19 April (Thursday, 0800), **end 4.9 week pp physics at √s = 510 GeV**
- 19 April (Thursday, store 16580), begin 1 week setup for UU
- 22 April (evening) first overnight stores for experiments
- 25 April (Wednesday), begin *3 week UU physics run*
- 15 May (Tuesday) **end 2.9 week UU physics √s = 193 GeV/n**, begin setup for √s = 200 GeV/n CuAu
- 18 May (Friday, store 16889) begin CuAu physics run

Today – 19 Jun

- 25 June (Monday, 08:00), **end 5.5 week √s = 200 GeV/n CuAu run**
- 25 June, begin √s = 5 GeV/n AuAu development
- 27 June (Wednesday, 08:00 – earlier if test complete) begin cryo warm-up
- 30 June, cryo warm-up complete (23.6 cryo-weeks)

Total Physics Weeks = 17.7

PHENIX BUR Goal = 2.4 nb^{-1} sampled, ~11 delivered
STAR Goal = ~5 nb^{-1} sampled, ~8 nb^{-1} delivered



Goals

C-A Operations-FY12

in progress/planned

concurrent with RHIC
setup with beams
ramp up luminosity

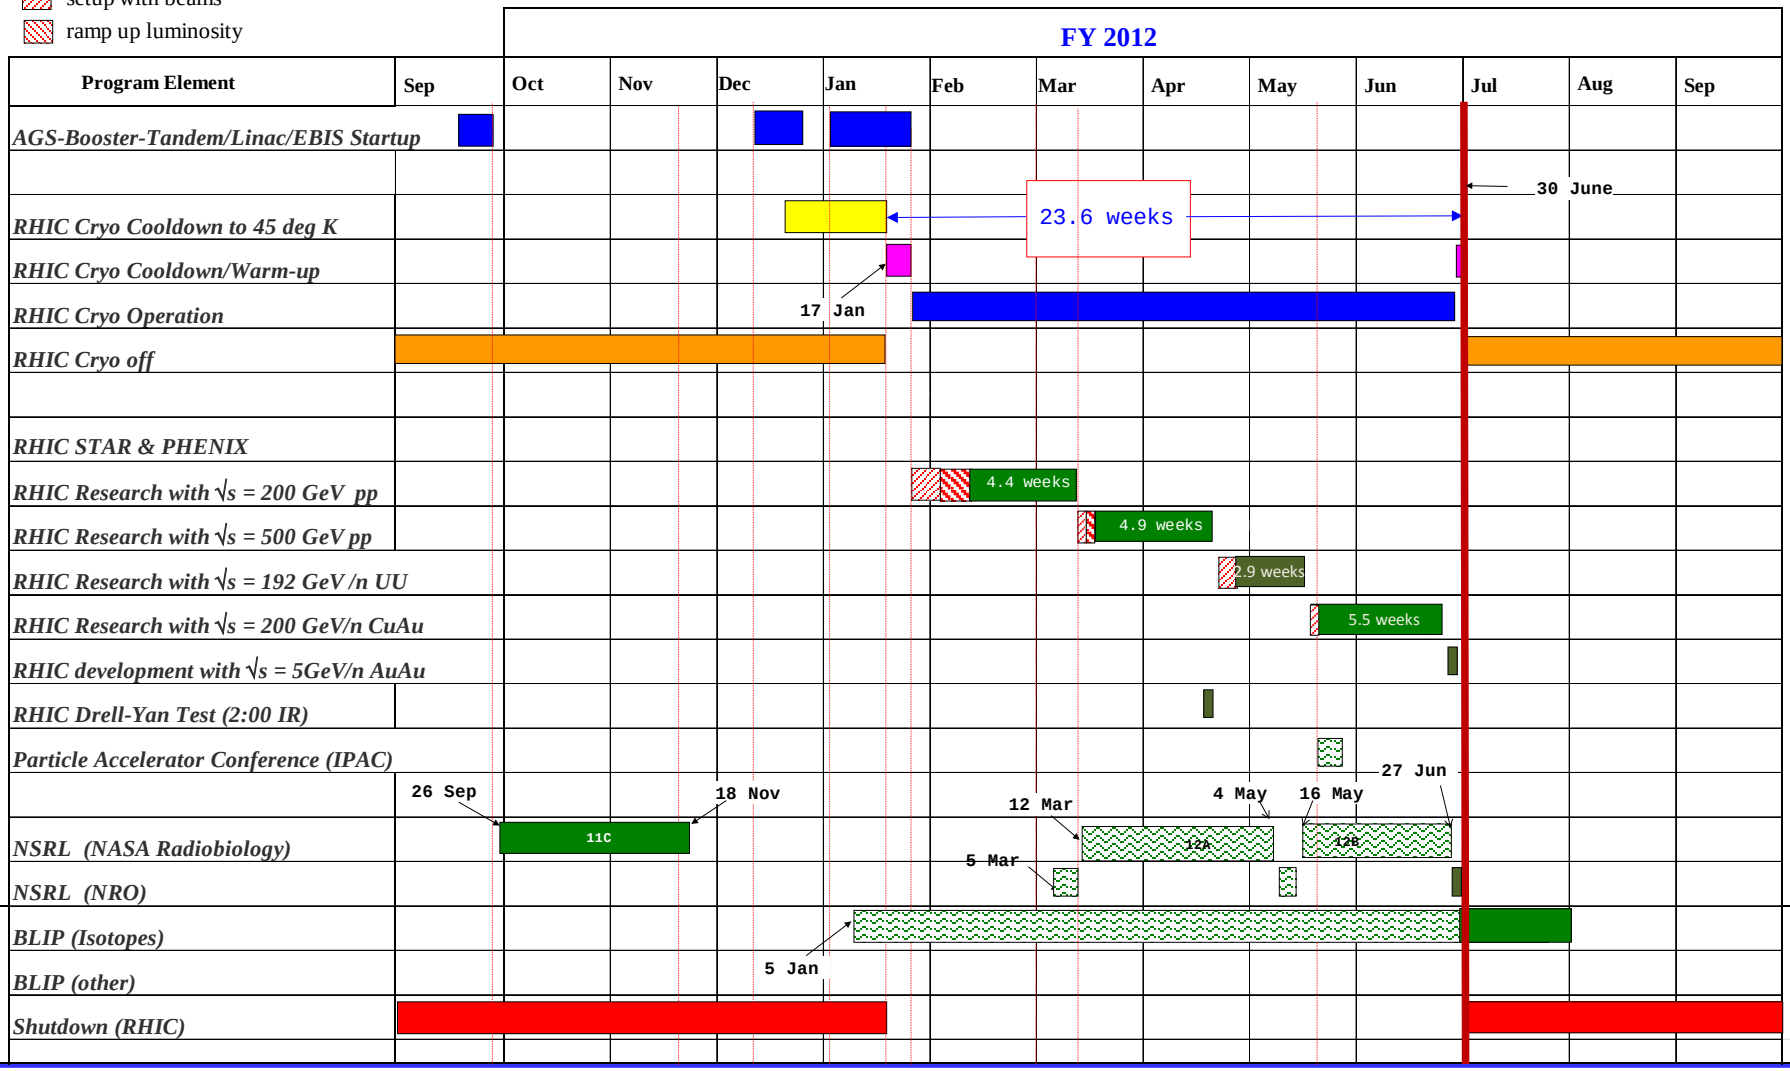

Table 2: Maximum luminosities that can be reached after a sufficiently long running period. For ion operation numbers are given for a beam energy of 100 GeV/nucleon. For polarized proton operation the beam energy is stated.

Mode	No of colliding bunches	Ions/bunch [10^9]	β^* [m]	Emittance [μm]	L_{peak} [$cm^{-2}s^{-1}$]	$L_{store\ avg}$ [$cm^{-2}s^{-1}$]	L_{week}
U-U	111	0.85	0.75	15-10	20×10^{26}	14×10^{26}	0.5 nb^{-1}
Au-Au	111	1.3	0.75	15-10	50×10^{26}	35×10^{26}	1.1 nb^{-1}
Cu-Cu	68	6.0	0.75	15-20	8×10^{28}	5×10^{28}	16 nb^{-1}
Cu-Au	111	4.0Cu/1.3Au	0.85	15-20	1.7×10^{28}	1.0×10^{28}	3.1 nb^{-1}
d-Au	111	110d/1.1Au	0.85	18-30	30×10^{28}	18×10^{28}	60 nb^{-1}
p↑-p↑* 100 GeV	107	135	0.85	15-20	50×10^{30}	30×10^{30}	10 pb^{-1}
p↑-p↑* 250 GeV	107	165	0.6	20-25	200×10^{30}	120×10^{30}	40 pb^{-1}

* We expect that an intensity-averaged store polarization P of up to about 60%, as measured by the H jet, can be reached at 100 GeV. At 250 GeV we expect the polarization P to reach about 55%. In Run-11 PHENIX had 107 and STAR 102 colliding bunches.

Recommendations following the June 6-8, 2011 PAC

For Run 12 the PAC recommends the following (*in order of priority*):

- 5 weeks of running with polarized proton collisions at 200 GeV.
- 7 weeks of running with polarized proton collisions at 500 GeV.
- 5 weeks of running with Cu+Au collisions at 200 GeV.
- 3 weeks of running with U+U collisions at 193 GeV.

For Run13 the PAC recommends the following (*not* in order of priority):

- 12 weeks of running with polarized proton collisions at 500 GeV.
- 5 week of running with polarized proton collisions at 200 GeV.
- 7 weeks of running with Au+Au collisions at full energy.

D.L. November 23, 2011 update

Cryo Issue

Our helium supplier no longer able to meet our peek demand of 4 trailers in a one week period. They can give us one trailer a week starting on December 31st, so we expect to have all the helium we need, on time, but we will have to store most of it in the dewars outside 1006B. This will result in our 4K cooldown being a little less stable and predictable than it has been for the past few years when we received all of the helium at 1005R over a short period of time. Because of this, I expect the 4K cooldown will take a least one additional day.

Cryogenic System Cooldown Projection based on Full Compressor Power Starting on January 17, 2012

.5 to 1 MW – Nov 23, 2011 through Dec 18, 2011 (temporary peaks up to 2 MW)

Scrub of RHIC rings and cryo plant, 14 atm pressure test of blue sextants 2/3 and 8/9 M-lines. Main compressor testing and scrub.

2.8 MW – Dec 19, 2011 through Jan 16, 2012

12/19/11	Start 45K cooldown of cryo plant
12/20/11	Start 45K wave in both RHIC rings
12/31/11	First liquid helium delivery, 1006B
01/07/12	Second liquid helium delivery, 1006B
01/14/12	Third liquid helium delivery, 1005R

6 to 8 MW – Jan 17, 2012 through Jan 22, 2012

01/17/12	Start 4K wave in Blue ring, Hi potting (3 days)
01/20/12	Estimate blue ring cold and stable, soak complete, ready for magnet powering.
01/20/12	Start 4K wave in Yellow ring, Hi potting (3 days)
01/21/12	Fourth liquid helium delivery
01/23/12	Estimate yellow ring cold and stable, soak complete, ready for magnet powering.

5 MW starting on Jan 23, 2012

01/23/12	Start T7 turbine

FY2012

Sept billed at $70/MWhr actual cost $42.86 -- $438K added to bank

Oct billed at $60/MWhr actual cost $62.80 -- $45.5K withdrawn from bank

FY2012 Bank Total = $392,563

From Fischer et. al. "RHIC Collider Projections (FY 2012 – FY 2016)"
14 October 2011

Cool-down from 50 K to 4 K	1 week	
Set-up mode 1 (p↑-p↑ at 100 GeV)	1 week	(no dedicated time for experiments)
Ramp-up mode 1	2 week	(8 h/night for experiments)
Data taking mode 1 with further ramp-up	5 weeks	
Set-up mode 2 (p↑-p↑ at 250 GeV)	½ week	(no dedicated time for experiments)
Ramp-up mode 2	1 week	(8 h/night for experiments)
Data taking mode 2 with further ramp-up	7 weeks	
Set-up mode 3 (U-U at 100 GeV/nucleon)	1 week	(no dedicated time for experiments)
Data taking mode 3 with further ramp-up	3 weeks	
Warm-up	½ week	

Run 12 projection for √s = 500 GeV pp

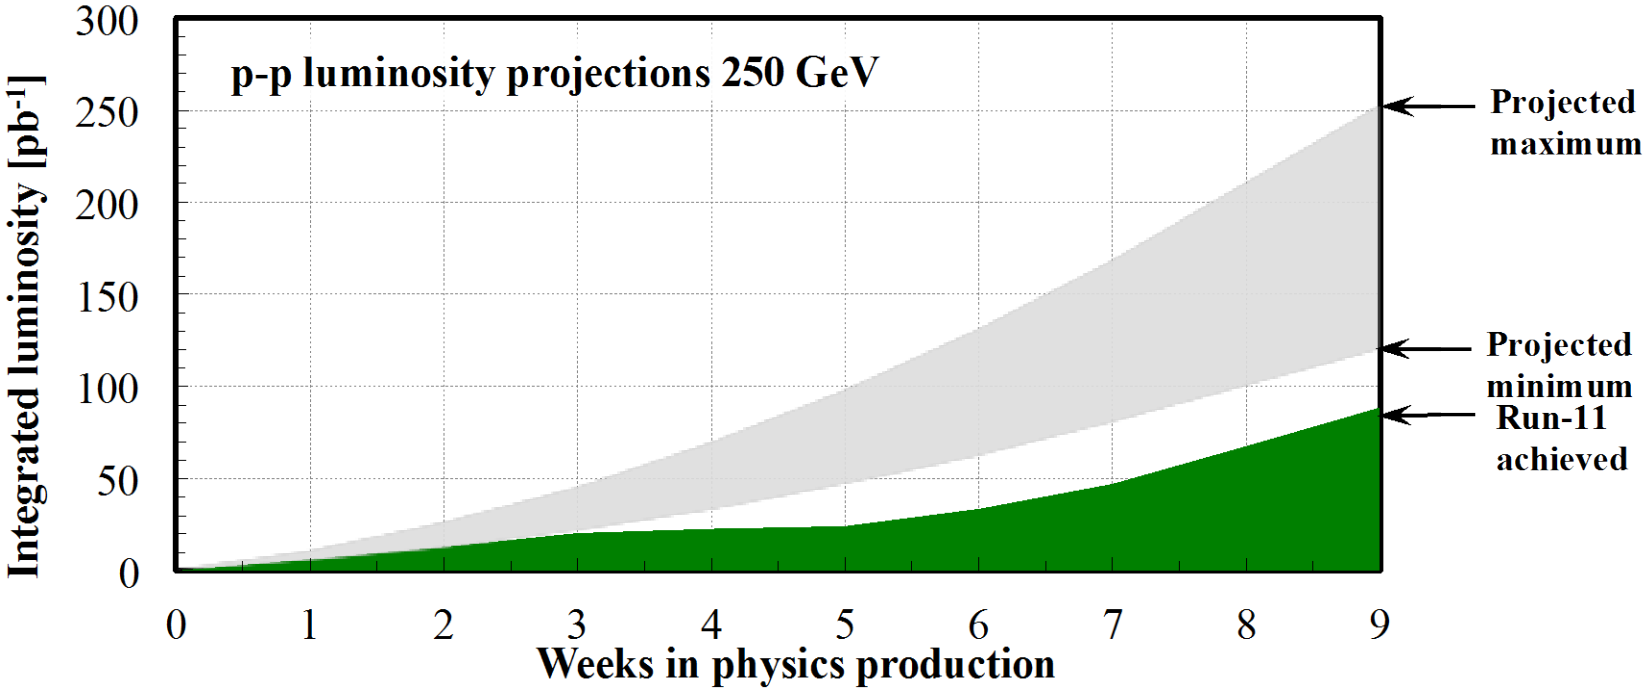

Figure 4: Projected minimum and maximum integrated luminosities for polarized proton collisions at 250 GeV beam energy, assuming linear weekly luminosity ramp-up in 8 weeks. An average store polarization between 45 and 50% is expected.
