

WELCOME

- Safety first
- SP's slide
- Experiments and Machine, status

Safety Training

- Peter Cirnigliaro

SP's Slide

- Today is D-6 : the 200 GeV run will end next Monday, 12th, morning - earlier plan was Friday 9
 - STAR will have eaten his fill of Lumi by the week-end
 - PHENIX has obtained two more bites
- NSRL started yesterday with a 1-week NRO program (Ta, Kr, Fe). NASA-Radiobiology will follow. On till June.
- BLIP is running steadily, I~90muA. 140 MeV program these days : 9th-12th.
- Tomorrow is APEX day, 0800 - 2400

WARNING to the experiments : High Intensity R&D
- Next Monday : turn over to 510 GeV program. In particular :
 - 255 GeV ramp developments on Monday and Tuesday
 - Regular (presumably long) Maintenance Day on Wednesday
