

# RHIC Status Update

Time Meeting, V. Schoefer  
3/13/12

- Finished the 100 GeV run at 0800 Mar 12
- Have been working toward 255 GeV beam since, but progress has been slow
  - Two shifts of power supply setup: problem with the IR DX heaters
  - One shift so far of ramp development
    - Problem with the DX magnet transfer functions preventing getting beam to store
- Plan:
  - Establish beam at store
  - Begin rebucketing setup
  - Raise intensity and bunch number
- 255 GeV collisions not likely until at least Friday

# RHIC p<sup>+</sup>p<sup>+</sup> Luminosity Run-12 ( $\sqrt{s}=200$ GeV)
