

Take 5 for Safety

Training
Pictures of the Week

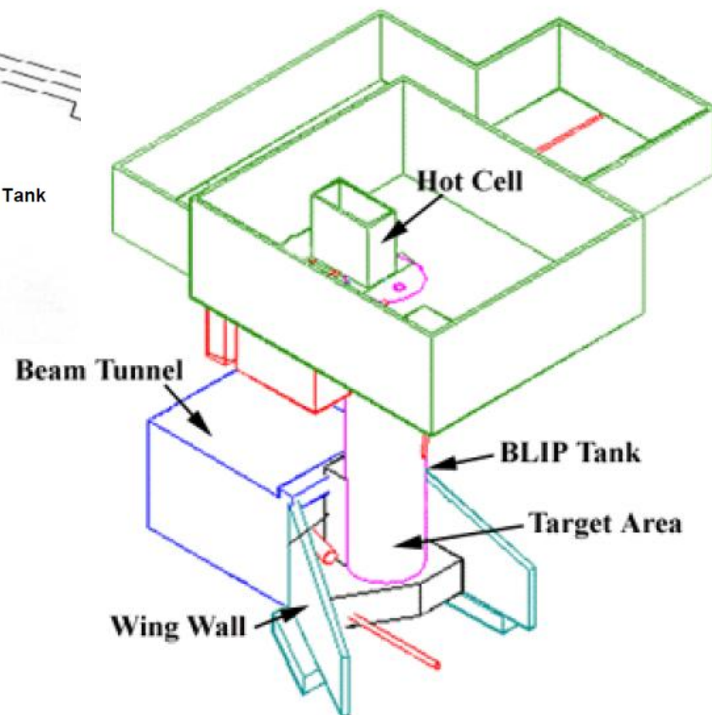

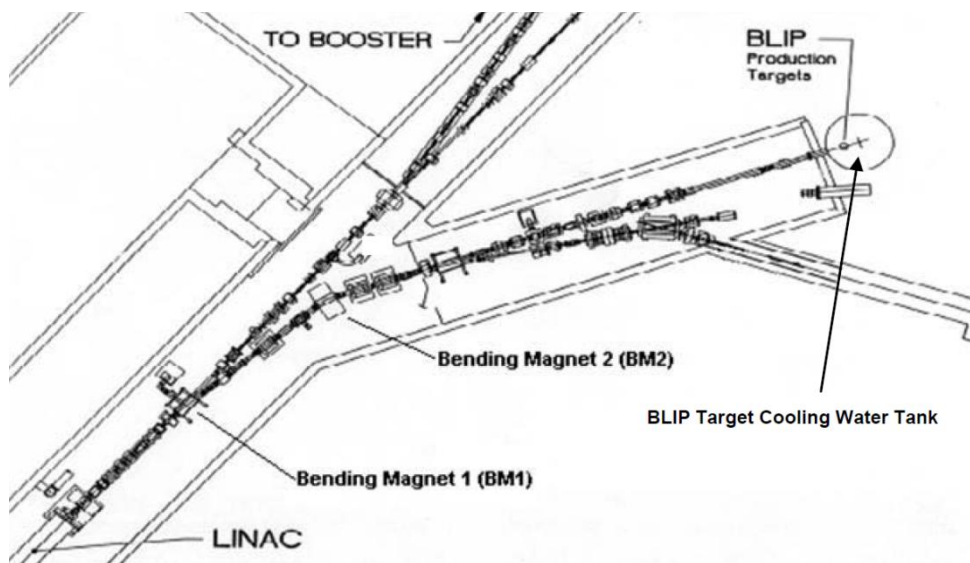

Collider-Accelerator Department
4-9-2013

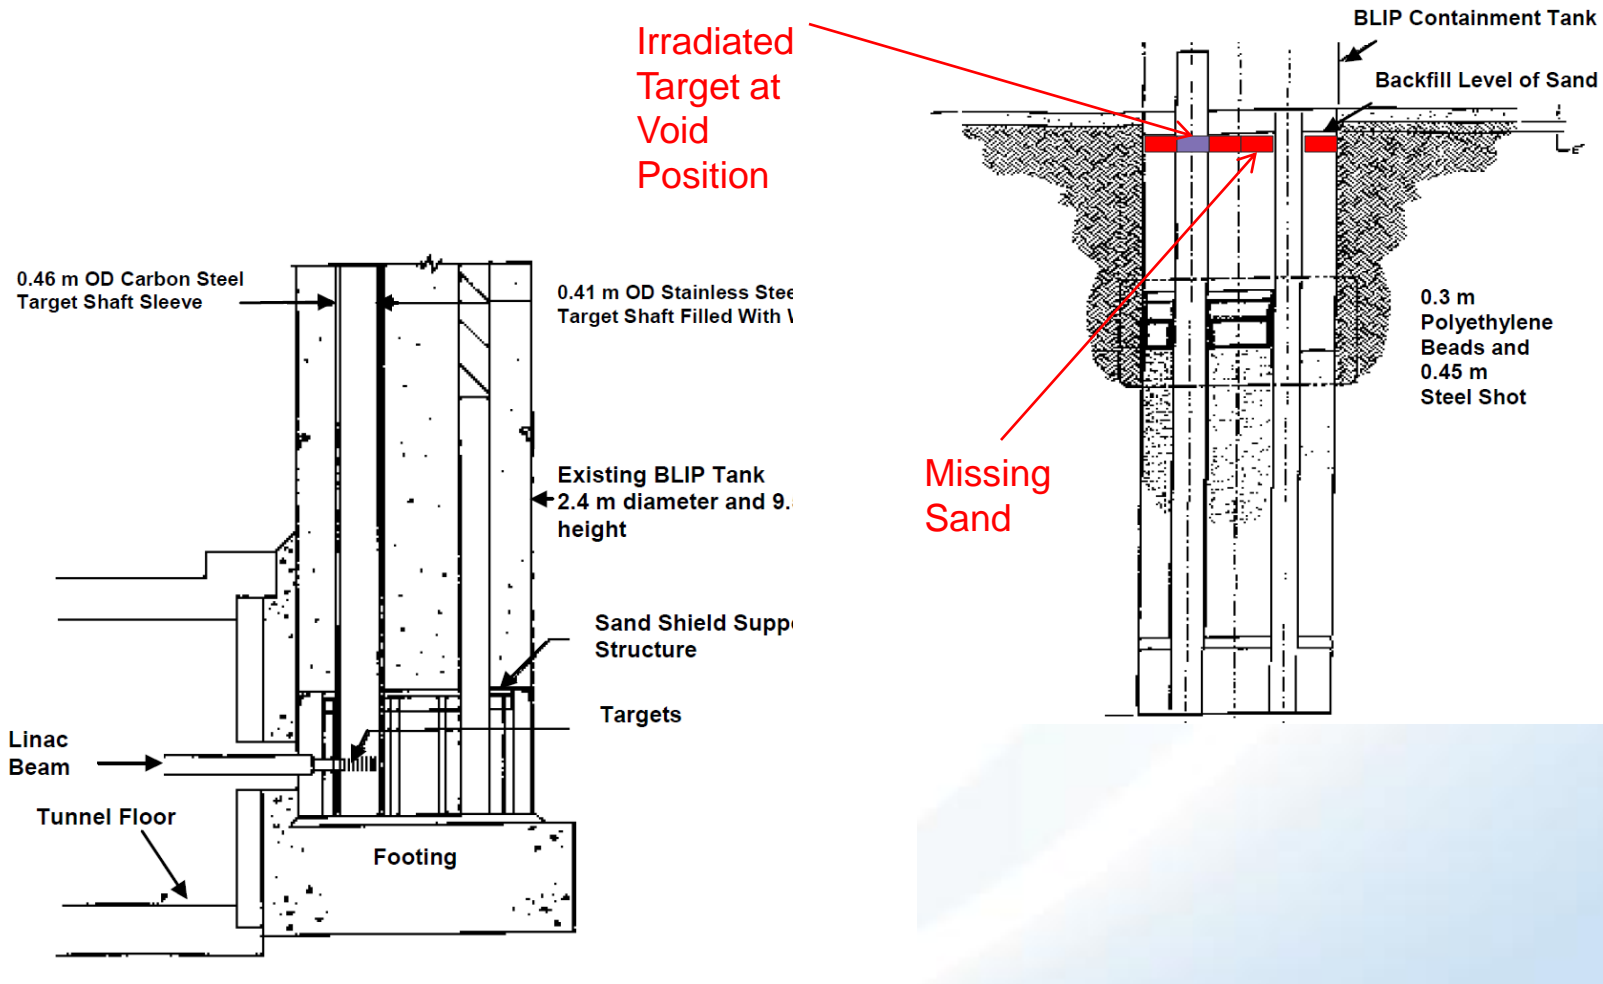

Training

- Training may help but it is not the key to safe operations
- Training information in the workplace is remembered for only a few seconds unless constantly repeated
- According to John Medina, the author of [Brain Rules](#), if you want to extend remembering to a few minutes or even an hour or two, you will need to consistently re-expose yourself to the information
- BNL LOTO training cannot be repeated at the rate required; however, supervisors could make LOTO awareness a frequent safety topic at meetings during the year
- There are other ways to extend remembering such as use of dramatic stories (e.g., BNL training videos like [Charlie's Story](#)); using visuals during presentations because we learn best through pictures; keeping presentations to less than 10 minutes because your audience checks out without new stimulus
